NOTE :- SHAPEWAYS CHASSIS PRICES DIFFER PLEASE SEE www.shapeways.com

If you're up for building something yourself, I also have this available.

Here is a link to someone's build with one…..

https://www.slotforum.com/forums/index.php?showtopic=185009

Below are details of my universal, adjustable wheelbase **FLEX chassis**.

Using technology to enhance traditional methods of scratch-building, my take on an adjustable universal chassis to give scratch builders and car converters another option to choose from.

Designed of course for the equally versatile Slot.It inline motor mounts, the modular chassis is 42mm wide and can be adjusted to suit the required wheelbase by cutting down the front section.

2 'pre-packed' versions available, however kits can be tailored to suit (please enquire).

FLEX 1 accepts unmodified motor mount. Wheelbase 104-76mm by trimming the front end section, up to 70mm can be achieved by trimming of the main part also.

FLEX 2 front of slot.it pod is cut down and my new cross member is glued to it to relocate the front pod mounts to the side. Wheelbase is 97-67mm by trimming the front end section, up to 63mm can be achieved by trimming the main part also.

Both have side and traditional post mounting options (posts and side mounts supplied)

Side and rear chassis pans supplied to complete the build.

Front end options widths available also with adjustable axle ride height.

Amato Slot Car Design

New 1/24th scale adjustable chassis, the FLEX 24

Wheelbase adjustable from 100mm to 125mm (Shorter version can go down to 90mm)

Wheelbase greater125mm possible with a bespoke front end (please enquire)

Designed for 3mm axles and gears

Front axle height adjustment with the addition of M2 grub screws

Multiple body shell fixing options (front/rear/side) with mounts provided

Rear motor mount

Multi-point fixing options for large range of adjustment/tuning to suit taste
